Citizenship: Turkish, German | Work authorization: Türkiye and EU, no sponsorship required

PROFESSIONAL SUMMARY

Computer Engineering graduate (B.Sc., Çankaya University, 2026) with backend experience in Java, Spring Boot and Node.js, plus AI work in Python, PyTorch and BERT/Transformers. Co-authored an IEEE-published paper on AI-assisted VR medical visualization and built LLM-based systems in the Freya hackathon and the Kalkan gateway project. Turkish and German citizen, fluent in German and English (C1).

WORK EXPERIENCE

Backend Developer Intern, Sebit Eğitim Bilgileri ve Teknolojileri A.Ş. *Jan 2026 – May 2026*
Ankara, Türkiye
- Developed and maintained RESTful APIs with Spring Boot and Node.js for Sebit's educational technology platform.
- Designed backend services with frontend and product teams to keep multiple applications available and performant.

Frontend Developer Intern, İŞ Yazılım *Jul 2024 – Aug 2024*
Ankara, Türkiye
- Built and optimised websites in ReactJS, applying front-end best practices.
- Developed dynamic user interfaces and extended functionality on live projects.

EDUCATION

B.Sc. in Computer Engineering, Çankaya University *2022 – 2026*
Ankara, Türkiye

TECHNICAL SKILLS

Languages: Python, C++, C, SQL
ML/AI: PyTorch, BERT/Transformers, nnU-Net, LLM orchestration
Backend/Data: Java (Spring Framework, Spring Boot, WebFlux, REST, Hibernate, JPA, JDBC, JAX-RS, Maven, Gradle), Node.js, MongoDB
DevOps Tools: Linux, Git, Docker, GitLab, GitHub Actions, CI/CD, Agile Scrum
Spoken Languages: Turkish (native), German (C1), English (C1)

PROJECTS

Freya "Build the Builder" Hackathon: AI Agent Builder for Turkish Banking Voice Calls *Oct 2026*
Python, LLM orchestration, Cloudflare Workers, REST APIs | GitHub
- Built a Python tool that reads a bank's unstructured documents (briefs, emails, meeting notes, API contracts, PDFs) and generates a working Turkish phone agent with no manual edits.
- Designed a hybrid setup where the LLM handles conversation and deterministic code handles date math, offer rules and closing logic, making behaviour repeatable and cutting response time.
- Built a self-testing loop that writes test calls, runs them against simulated customers, scores results and repairs the agent. Reached 216/250 on an independent edge-case test set and 9/10 on the public benchmark.
- Implemented KVKK safeguards (data minimisation, no card number exposure), tested with adversarial prompt-injection scenarios, and deployed a mock banking API on Cloudflare Workers covering 7 services.

Kalkan: KVKK-Compliant LLM Gateway *Oct 2026*
Java 21, Spring Boot WebFlux, Docker, GitHub Actions | GitHub
- Built an OpenAI-compatible gateway that masks Turkish personal data (TCKN, IBAN, card numbers) before prompts reach the LLM and restores it in streamed responses.
- Applied checksum validation (TCKN, IBAN mod-97, Luhn) to avoid false positives.
- Set up CI/CD with tests on every push, Docker images published to GHCR, and Prometheus metrics.

MedVisVR, Term Project (VR Medical Imaging for Meta Quest 3) *Sep 2025 – Jun 2026*
Unity (C#), Python, nnU-Net | GitHub
- Built interactive visualization features in Unity (C#) and integrated nnU-Net segmentation pipelines in Python to convert MRI/CT scans into 3D anatomical models.
- Optimised real-time rendering for medical education and surgical planning, and worked on VR interaction design, UI and medical image processing workflows.
